EXPERIENCE

Data Science Intern

Jan 2026 – Present

The Entrepreneurship Network

- Built an NLP pipeline on 487K text samples to classify AI-generated vs human-written content with extensive data cleaning and EDA.
- Experimented with multiple models (Logistic Regression, XGBoost, Transformers) and finalized Naive Bayes; achieved 96.6% accuracy, 0.966 F1-score, and 0.99 ROC-AUC.

Research Intern (AI & Computational Biology)

Jan 2026 – Present

Indian Institute of Information Technology, Nagpur

- Architected an in-silico vaccine design pipeline for mRNA and saRNA constructs under the Govt. of India — One Nation One Health initiative.
- Integrated Python tools for RNA encoding, statistical feature extraction, and predictive modeling over 500,000+ data points using embedding-based representations.

EDUCATION

Indian Institute of Information Technology, Nagpur

2023 – 2027

B.Tech in Computer Science and Engineering (AI & ML)

GPA: 7.17 / 10

PROJECTS

APOA (Autonomous Multi Agent System) | [GitHub](#) | [Live](#) | Python, LangChain, Groq, FastAPI, FAISS, Streamlit,

- Engineered a goal-driven autonomous agent with dynamic tool selection across 6 integrated APIs (web search, calculator, email, reminders) executing multi-step tasks without human intervention.
- Implemented dual-layer memory architecture — ConversationBufferMemory for session context and FAISS vector store for long-term knowledge persistence across sessions.
- Built async FastAPI backend with RESTful endpoints, used Groq LLaMA 3.3 70B with function calling for autonomous tool orchestration.

RAG Document Assistant | [GitHub](#) | [Live](#) | Python, FAISS, LangChain, Groq LLMs, Hugging Face, PyMuPDF

- Designed an agentic RAG system for QA over 100+ page documents with dynamic retrieval and contextual memory management via LangChain orchestration.
- Generated dense semantic embeddings indexed in FAISS for sub-second vector search; reduced hallucinated responses by 40% vs naive prompting.

Digital Diagnosis | [GitHub](#) | Python, PyTorch, NLP, Transformers (BioClinicalBERT), Flask

- Fine-tuned BioClinicalBERT on 191K+ annotated medical samples spanning 254 disease classes for symptom-based condition prediction.
- Implemented async RESTful APIs with Flask achieving average prediction latency below 300ms with structured JSON response schemas.

ACHIEVEMENTS

- **Kaggle Notebooks Expert:** 3 Gold, 5 Silver, 19 Bronze Medals | Global Rank: 76 / 59,000+ (Top 0.2%).
- **Competitions:** Ranked 69/3724 in Loan Payback Challenge and 84/4206 in Diabetes Prediction Challenge.
- **Competitive Programming:** 2 Star CodeChef, Solved 200+ problems on LeetCode.
- **Hackathons:** Finalist Analytica ML Hackathon, Cleared 3 rounds GRAB Hackathon.

TECHNICAL SKILLS

Languages: Python, TypeScript, C, C++, SQL, JavaScript

AI Frameworks: LangChain, LangGraph, LlamaIndex, RAG, CrewAI

AI & ML: NumPy, Pandas, PyTorch, TensorFlow, Transformers, OpenCV, Reinforcement Learning,

Gemini API Systems & Tools: FastAPI, FAISS, Flask, Streamlit, Hugging Face, RESTful APIs,

Docker, PowerBI, Tableau

Cloud & Data: Azure, Apache Airflow, Git/GitHub

Web: React, TypeScript, HTML, CSS
